Moments of the Multivariate Gaussian (1)

$$\mu_k = \int x^k p(x) dx = \int x^k \frac{1}{(2\pi)^{D/2}} \exp\left(-\frac{1}{2}(x-\mu)^T \Sigma^{-1} (x-\mu)\right) dx$$

$$= \int x^k \frac{1}{(2\pi)^{D/2}} \exp\left(-\frac{1}{2}x^T \Sigma^{-1} x + x^T \Sigma^{-1} \mu - \frac{1}{2}\mu^T \Sigma^{-1} \mu\right) dx$$

thanks to anti-symmetry of x

$$\mu_k = \mu$$

Multivariate Gaussian Distribution

If $X = (X_1, \dots, X_D)$ is an D -dimensional random vector with a multivariate Gaussian distribution with mean vector μ and covariance matrix Σ , then the pdf can be expressed as

$$p(X) = \frac{1}{(2\pi)^{D/2} |\Sigma|^{1/2}} \exp\left(-\frac{1}{2}(X-\mu)^T \Sigma^{-1} (X-\mu)\right)$$

$\mu = \begin{bmatrix} \mu_1 \\ \vdots \\ \mu_D \end{bmatrix}$
 $\Sigma = \begin{bmatrix} \sigma_1^2 & \dots & 0 \\ \vdots & \ddots & \vdots \\ 0 & \dots & \sigma_D^2 \end{bmatrix}$ (Diagonal of Σ)
 $\sigma_i^2 = \text{Var}(X_i) = \text{Cov}(X_i, X_i)$

If X_1, X_2, \dots, X_D are independent random variables, the covariance matrix is reduced to diagonal, i.e. $\sigma_{ij} = 0 \forall i \neq j$

$$p(X) = \prod_{i=1}^D \frac{1}{\sqrt{2\pi} \sigma_i} \exp\left(-\frac{X_i^2}{2\sigma_i^2}\right)$$

Multivariate gaussian conditional distribution. Multivariate gaussian cdf. Multivariate gaussian covariance matrix. Multivariate gaussian covariance. Multivariate gaussian copula.

Hepatitis C is a virus transmitted through the blood from one person to another. If you use illicit drugs, which you should seek treatment for a litany of reasons, never share needles with other users. Hepatitis C Treatment Hepatitis C is the leading cause of liver cancer and liver transplants, according to WebMD. Acute hepatitis C is the phase when you are first exposed to the disease. Complications From Hepatitis C Hepatitis C can lead to liver cancer. This can then lead to complete liver failure and the need for a transplant to stay alive. The code uses Boost for the univariate normal and Eigen for matrix handling. #include #include #include /* We need a functor that can pretend it's const, but to be a good random number generator it needs mutable state. If you were to have symptoms of hepatitis C, what would they look like? MORE FROM SYMPTOMFIND.COM Some people have it and may never know it as they are affected by any sorts of symptoms. However, there is no easy fix that works for each person. If you have symptoms at all, here are some to look out for, as listed by the Mayo Clinic. It can remain silent until there is severe damage to your liver. I'm open to improving it if someone suggests a way. // But a covariance matrix might be pos-semi-definite. Most medications can remove all traces of the virus in your blood in about 12 weeks. Practice safe sex — use a condom. Here are some situations that put you at an increased risk of getting the disease as cited by the Mayo Clinic. Since this question has garnered a lot of views, I thought I'd post code for the final answer that I found, in part, by posting to the Eigen forums. It is curable. These include bruising easily, fatigue, bleeding easily, itchy skin, jaundice or yellowing of the skin, dark-colored urine, confusion and swelling in your legs. Who Is at Risk to Get Hepatitis C? */ namespace Eigen { namespace internal { template struct scalar_normal_dist_op { static boost::mt19937 rng; // The uniform pseudo-random algorithm mutable boost::normal_distribution norm; // The gaussian combinator EIGEN_EMPTY_STRUCT_CTOR(scalar_normal_dist_op) template inline const Scalar operator()(Index, Index = 0) const { return norm(rng); } }; template boost::mt19937 scalar_normal_dist_op::rng; template struct functor_traits { enum { Cost = 50 * NumTraits::MulCost, PacketAccess = false, IsRepeatable = false }; }; } // end namespace internal } // end namespace Eigen /* Draw nn samples from a size-dimensional normal distribution with a specified mean and covariance */ void main() { int size = 2; // Dimensionality (rows) int nn=5; // How many samples (columns) to draw Eigen::internal::scalar_normal_dist_op randN; // Gaussian functor Eigen::internal::scalar_normal_dist_op::rng.seed(1); // Seed the rng // Define mean and covariance of the distribution Eigen::VectorXd mean(size); Eigen::MatrixXd covar(size,size); mean
